

EDUCATION AND TRAINING

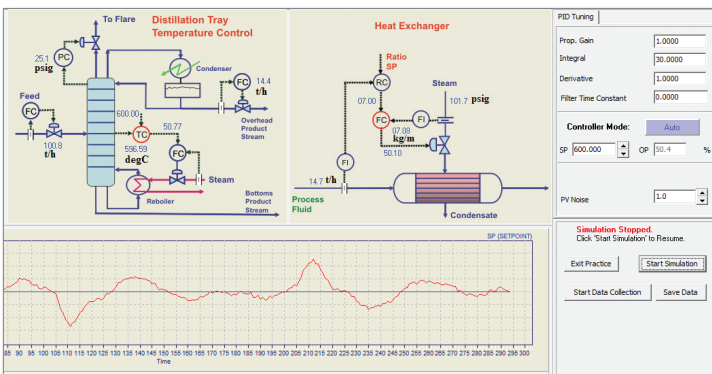

Practical courses with the use of an interactive real-time process control simulator:

- **APC-1** Automatic process control
- **APC-2** Advanced process control
- **APC-3** Process diagnostics & optimization
- **APC-4** Process measurements
- **APC-5** Batch process control & optimization
- **APC-6** Modeling & process simulation

Most process plants can achieve **significant savings** with using adequate process control, measurement and diagnostic techniques.

During the courses **real examples** of industrial processes are interactively simulated and analyzed.

Upon completion you will understand the **key elements** related to process performance, process control, measurement techniques and process control optimization.

Training is important for the professionals directly involved in production, as well as for the personnel responsible for the maintenance and **optimal operation** of the plant.
